Bridge Course Report. 2023-24

To teach a new (or a foreign language to someone is as tough as searching for a needle in a haystack.

Department of Arabic conducted bridge Course onwards to solve the queries of F.Y.B.A students by following methods.

- 1) Reading Habits
- 2) Listening Practice
- 3) Writing skill

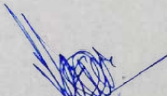

In this Bridge Course teachers use to explain every word to them in the native language to make them understand and learn Arabic. We not only teach them how to use the Arabic website but also to find out the root words and its meaning from the dictionary.

This course helped to bridge the gap in their level of understanding of the advanced topics and bring them at par with other students of their class. This course duration was Two weeks. It was conducted twice in a week for one hour by teachers of the department after regular class. Approximately 30 students from F.Y/S.Y/TYBA attended the class. The course would help them better in their regular studies.

Title of the Lecture Sessions:

"The basics of statistics—a beginner's guide to effective analysis"

About the Lectures:

Statistics is that branch of Mathematics that finds practicability in almost all spheres of human endeavor. In addition, effective analytical research in any discipline cannot be complete without the application of Statistical methods and techniques. As such, not only students of Statistics but also, persons from varied fields are required to possess a sufficient amount of a basic level of statistics. Also, some students enrolled in an advanced course of Statistics may not have had the benefit to learn the subject in their junior classes, making it less likely for them to catch up with the other students. Therefore, a special course needs to be designed to cater to the needs of such categories of people.

The Bridge Course designed by the Department of Statistics is one humble effort in this direction.

Aims and Objectives:

This course is specially designed to serve as a sort of a 'bridge' to enable persons with little or no knowledge of the subject to close the gap in their level of understanding and bringing it at least at par with the average student:

Ismail Yusuf College is committed to the cause of quality education for all. To ensure that this is achieved, the college is always willing to undertake activities and events that aim at improving and maintaining high standards in all aspects of education. A Bridge Course is an exceptional exercise where in the emphasis and focus is on the weaker section of the student population. The weak students need special attention which they may not be able to receive in their regular classes and thus may lag behind.

The department of Statistics is one of the foremost departments of the colleges, running the well-fledged undergraduate course. Statistics, being a subject that is useful to people from varied fields, is invariably in high demand. Thus, the bridge course aims to be immensely well received by a sizeable segment of individuals, desirous of workable and basic knowledge of Statistics.

Duration: 6 weeks (40 days)

Total Number of lecture hours: 24 (4 lecture hours per week)

Weekly schedule of the course: two hours a day – two days a week

Target Participants: Students with a weak background in mathematics, students of S.Y. B.Sc. and T.Y.B.Sc. Desirous of increasing their knowledge base in Mathematics and Statistics can benefit immensely from these lectures. Academicians and Research students from any discipline such as Economics, Psychology, Sociology, Pharmacy, Medicine, Management, to name a few, will also find the sessions beneficial. We wish to create to such a composite and diverse group.

Syllabus:

The content has been divided into 4 Modules comprising of 4 major topics in the study of Statistical techniques, as follows:

MODULE	TOPIC	No. of lectures
I	PROBABILITY: Concepts and Definitions, Simple and compound events, Union and Intersection of events using set theory and Venn diagram, Addition and Multiplication theorem, Bayes' theorem, Problems based on the above.	6L
II	MEASURES OF CENTRAL TENDENCY AND VARIATION: Concept and Definitions, Important Averages – Mean, Median, Mode, Geometric Mean, Harmonic Mean etc., their calculation for different types of data, Combined Mean, merits & demerits, Important measures of Variation – Range, Q.D., M.D., s.d., their relative measures, their calculation for different types of data, applications, Problems based on the above.	6L
III	CORRELATION AND REGRESSION: Concept and Definitions, different types of correlation, Scatter Diagram, Karl Pearson's Correlation coefficient, Spearman's Rank Correlation coefficient. Scatter Diagram to study Regression, Method of regression lines based on method of Least Squares, Properties and Results of Regression. Problems based on the above.	6L
IV	IMPORTANT DISTRIBUTIONS AND TESTS OF SIGNIFICANCE: Discrete Distributions – Uniform, Binomial, Poisson, their p.m.f., Mean and Expectation. Continuous Distributions – Normal, t, Chi Square, their p.d.f., Mean and Expectation. Concepts of Hypothesis, tests of Significance based on above distributions, Problems based on the above.	6L
